SERSTECH ARX

Small enough to fit it in your pocket – big enough to redefine Raman

Serstech Arx is a revolutionizing instrument, introducing patented auto-focus technology for the first time in handheld Raman instruments. Serstech Arx makes it easier to identify unknown substances and provides fast decision support in the field.

Serstech Arx gives a precise result since it automatically finds the optimal focus distance when making a measurement. It can detect the difference between the container and the actual substance, giving improved a faster results. Auto-focus also makes it possible to detect and minimize fluorescence from containers.

Serstech Arx is built on a modern software platform, putting usability front and center. The graphical user interface is easy to navigate and the QuickScan button provides results with a single press of a button. Serstech Arx is lighter and smaller compared to other models on the market and yet even more powerful. Serstech Arx lets users focus on what is important and make decisions based on reliable measurement results in the field.
